Amazon Sales Analysis REPORT

BY ANIL DONGARE

ABSTRACT

- This project focuses on analyzing Amazon sales data using Microsoft Excel.
- The objective is to clean raw sales data, perform data analysis, and build an interactive dashboard to generate meaningful business insights.
- The dashboard helps in understanding regional performance, product trends, customer behavior, and the impact of discounts on sales.

QUESTIONS

1. What is the Total Revenue?
2. What is the Total Orders Count?
3. What is the Average Order Value (AOV)?
4. Which Product Category generates highest revenue?
5. Which Region generates highest sales?
6. Monthly Sales Trend (Line Chart)
7. Top 10 Selling Products
8. Revenue by Payment Method
9. Impact of Discount on Sales
10. Which month had highest revenue?

OBJECTIVE

- Perform region-wise sales analysis
- Calculate key KPIs
- Create Pivot Tables
- Design interactive dashboard

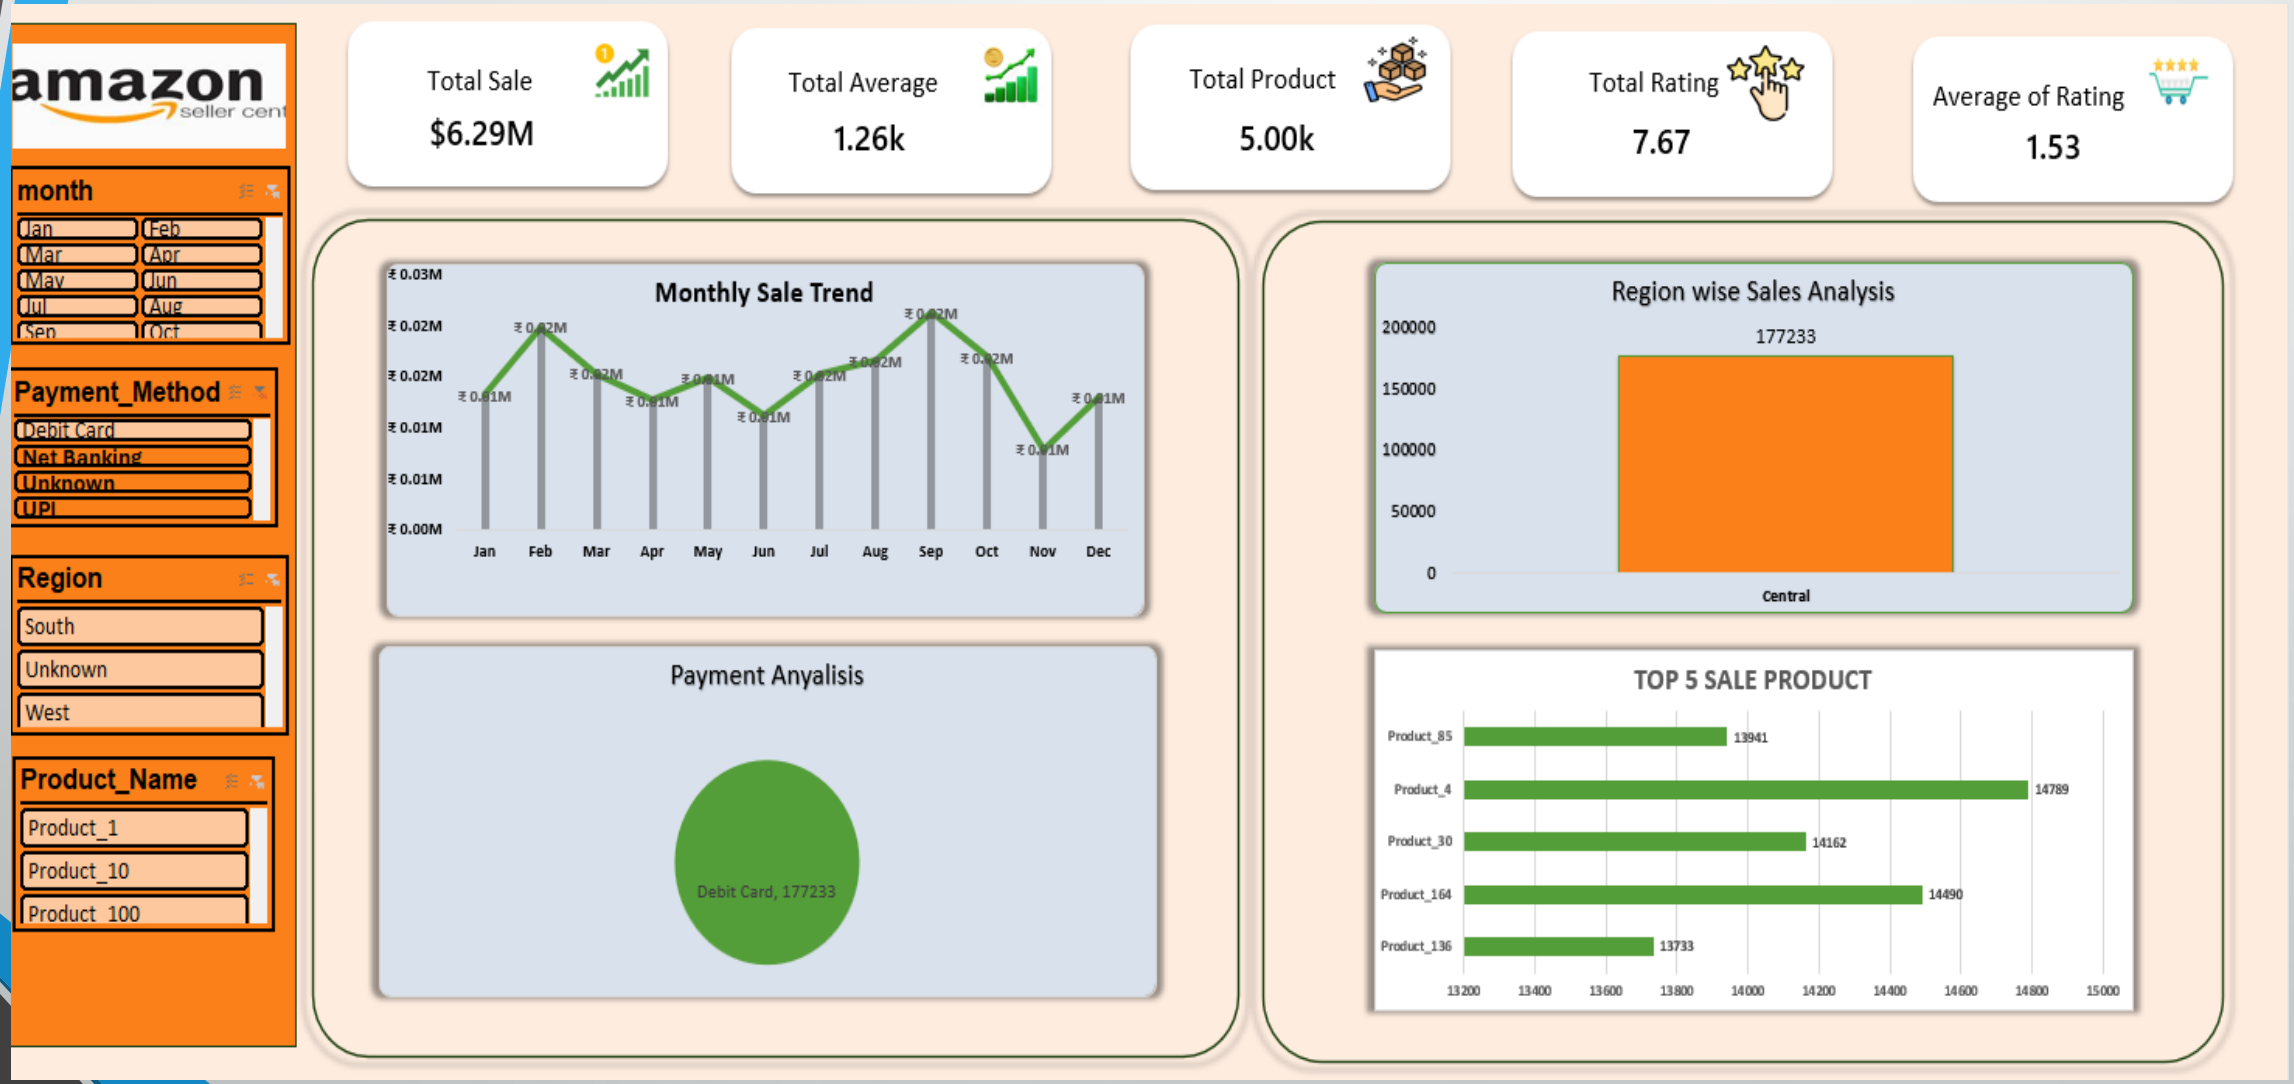
FINAL DASHBOARD



INSIGHT

- The business generated total sales of ₹6.29M with an average order value of ₹5K, showing stable revenue performance.
- Sales peaked in July and dropped in September, indicating seasonal demand fluctuations in the business.
- North region contributes the highest sales, while East region shows the lowest performance and needs improvement.
- A few products like Product_26 drive major sales, showing dependency on top-performing items.

CONCLUSION

- The dashboard shows a strong overall business performance with total sales of ₹6.29M and a stable average order value of ₹5K. Sales follow a seasonal trend, peaking in July, while the North region contributes the highest revenue.

- However, the low average rating (1.84) and presence of "Unknown" categories indicate potential customer satisfaction and data quality issues. To improve long-term growth, the business should focus on enhancing customer experience, strengthening low-performing regions like East, and reducing dependency on top-selling products.

THANK YOU…
